

Business Requirements Document (BRD)

Project Title

Bangalore Restaurant Market Analysis Using Zomato Data

1. Executive Summary

A restaurant group is planning to expand its business operations in Bangalore. However, management lacks sufficient market intelligence regarding the most promising locations, cuisine preferences, pricing strategies, and customer engagement factors. This project aims to analyze Bangalore's restaurant market using Zomato restaurant data to identify growth opportunities and provide data-driven recommendations for expansion.

2. Business Problem Statement

The restaurant group wants to expand into Bangalore but does not know where the best market opportunities exist. Management requires insights into customer preferences, location performance, cuisine demand, pricing patterns, and service features that influence restaurant success.

Without data-driven decision-making, the company risks opening restaurants in low-demand areas, choosing unsuitable cuisines, or adopting ineffective pricing strategies.

3. Business Objectives

Objective 1

Identify the most **attractive locations** for restaurant expansion in Bangalore.

Objective 2

Understand which **cuisine categories** have the most profit and highest customer demand, market presence.

Objective 3

Analyze **customer preference** and factors influencing restaurant popularity.

Objective 4

Evaluate the **impact of online ordering** and table booking services on restaurant performance.

Objective 5

Determine the most ideal **pricing strategy** for future restaurant expansion.

Business Requirements Document (BRD)

4. Key Business Questions

Q1

Why are some restaurants significantly more popular than others?

Q2

Why are certain locations more successful than others?

Q3

Why do certain cuisines dominate the Bangalore restaurant market?

Q4

Why do restaurants offering online ordering attract higher customer engagement?

Q5

Why do some price segments attract more customers than others?

5. Stakeholders

Primary Stakeholders

- Restaurant Group Management
- Expansion Strategy Team
- Operations Team

Secondary Stakeholders

- Marketing Team
- Business Development Team
- Investors

6. Scope of Analysis

In Scope

- Restaurant ratings
- Customer votes

Business Requirements Document (BRD)

- Restaurant locations
- Cuisine categories
- Cost for two people
- Online ordering availability
- Table booking availability
- Restaurant distribution across Bangalore

Out of Scope

- Revenue analysis
- Profitability analysis
- Customer demographics
- Competitor financial data
- Real estate costs

7. Key Performance Indicators (KPIs)

Location KPIs

- Number of restaurants per location
- Average rating by location
- Average votes by location

Customer Engagement KPIs

- Total votes
- Average votes per restaurant
- Average restaurant rating

Cuisine KPIs

- Number of restaurants by cuisine
- Average rating by cuisine
- Average votes by cuisine

Service KPIs

- Online ordering adoption rate

Business Requirements Document (BRD)

- Table booking adoption rate
- Average rating by service type

Pricing KPIs

- Average cost for two
- Rating by price segment
- Votes by price segment

8. Expected Deliverables

SQL Deliverables

- Business query analysis
- Aggregated business metrics
- Location and cuisine insights

Excel Deliverables

- Data cleaning workbook
- Pivot table analysis
- Exploratory summaries

Python Deliverables

- Data preprocessing
- Exploratory data analysis
- Statistical insights
- Visualizations

Power BI Deliverables

- Executive dashboard
- Location analysis dashboard
- Cuisine analysis dashboard
- Pricing analysis dashboard
- Expansion recommendation dashboard

Business Requirements Document (BRD)

9. Expected Business Outcomes

The project will provide actionable recommendations regarding:

- Best locations for expansion
- Most promising cuisine categories
- Optimal pricing strategy
- Importance of online ordering services
- Customer engagement drivers

These insights will help management make informed expansion decisions while minimizing business risk.

10. Risks & Limitations

Risks

- Customer ratings may be influenced by personal bias.
- High ratings do not necessarily indicate profitability.
- Customer engagement may be affected by factors not captured in the dataset.

Limitations

- The dataset does not contain revenue or profit information.
- Market conditions may have changed since the data was collected.
- Customer demographic information is unavailable.
- Some restaurants may be missing from the dataset.
- Results should be interpreted as market indicators rather than definitive business
